(54) LIGHTING SWITCH

(57)Abstract:

PURPOSE: To provide a lighting switch for reducing the height of an LED light source and for providing an effective lighting effect.

CONSTITUTION: A chip 100 for lighting source is formed by mounting an LED bare chip device 26 on an electrode circuit 22 on a flexible print board 20. A lighting switch unit can be formed thinner to a large degree compared with a chip LED for which a ceramics substrate is used as a substrate. The degree of freedom of installing the lighting switch unit in various units can thus be enhanced.

LEGAL STATUS.

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
